CONSULTATION AND IMAGING SYSTEM FOR PROFESSIONAL CLINIC USE

Facial Skin Analyser

Model QSPC-01 · 2D multi-light imaging and analysis

A consultation camera that photographs the face under four types of light and turns the images into a clear, visual report. It is designed to help you show clients what you can see, plan a course of treatment with them, and compare images from one visit to the next.

- Canon camera, 20 megapixels
- Four types of light
- Eight image views
- Before and after comparison
- Windows or Android
- Two year warranty

£4,650 plus VAT

Price includes the analyser, tablet and electric lifting trolley. Training manual supplied. An annual software fee applies to some features, see page 6. Finance available, subject to status and lender approval.

HOW IT WORKS

Four types of light, eight views of the same face

The magnetic hood closes out the room light and the camera photographs the face under four types of light. The software then builds eight views from those photographs. Each one is designed to make a different feature of the skin easier to see than it is in ordinary light.

RGB light · **Parallel-polarised light** · **Cross-polarised light** · **UV light**

Natural image
The reference photograph, in ordinary colour.

Parallel-polarised image
Designed to show surface texture, such as lines and pores.

Cross-polarised image
Reduces surface shine, so colour beneath the surface is easier to see.

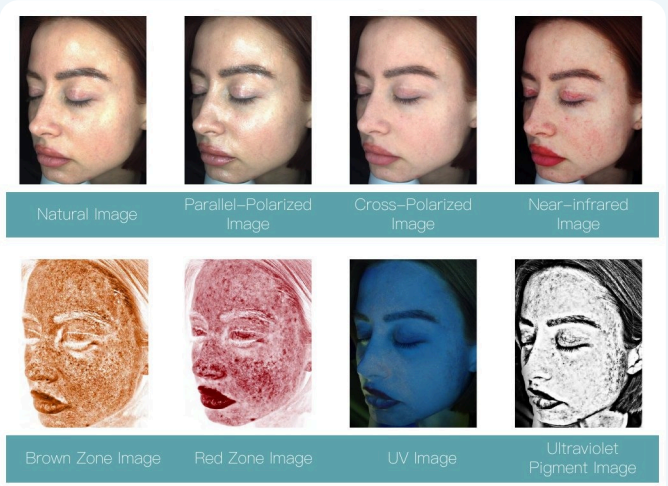

Near-infrared image
Described by the manufacturer as its view for skin sensitivity.

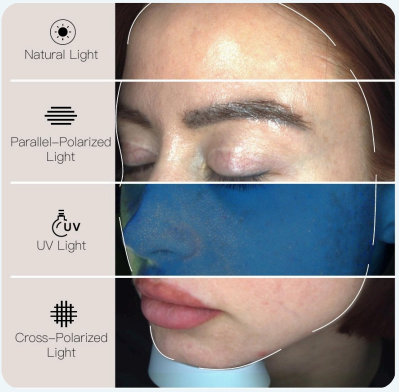

Brown zone image
A colour map designed to show brown pigment.

Red zone image
A colour map designed to show areas of redness.

UV image
Designed to show fluorescence in the pores, which is hard to see in daylight.

Ultraviolet pigment image
Designed to show pigment beneath the surface.

Manufacturer's sample images. Above, the eight views. Left, one face photographed under the four types of light.

WHAT THE SOFTWARE REPORTS

Four areas of analysis, more than thirty measurements

The software marks up each image and scores what it finds. The manufacturer groups the results into four areas, with more than thirty measurements across them, and also lists skin tone. The main features it names are below, in plain terms.

Ageing

Forehead lines, frown lines, crow's feet and nasolabial folds.

Sensitivity

Areas of redness, visible thread veins and blemishes.

Pigmentation

Brown spots, patches of uneven pigment, freckles and marks left by blemishes.

Skin texture

Pores, clogged pores, fine lines and porphyrin fluorescence.

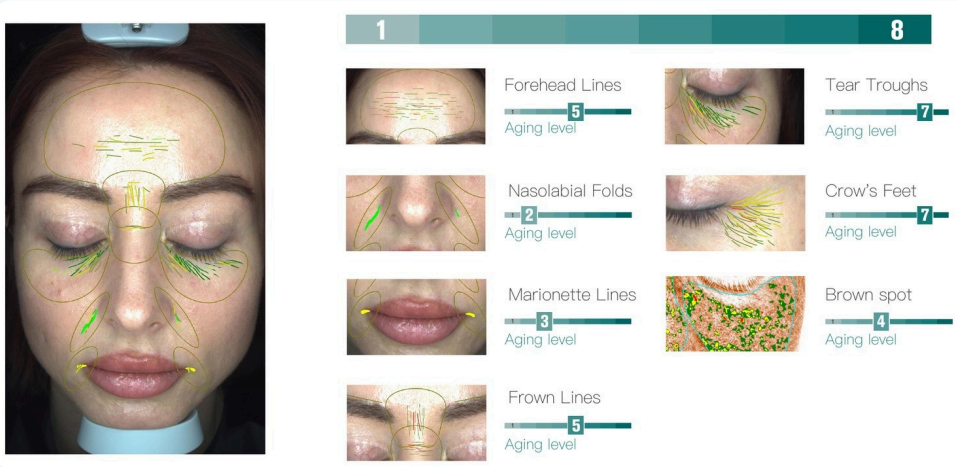

It highlights, it does not diagnose. On screen, the software uses the manufacturer's own labels for these features, and some of them are clinical terms: papules, rosacea, acne, spider veins, age spots, melasma and acne scars. Treat those as descriptions of what the image shows, not as a diagnosis. Anything that might need a medical opinion should be referred to a GP or dermatologist before you treat.

TRACKING CHANGE

See the difference between visits

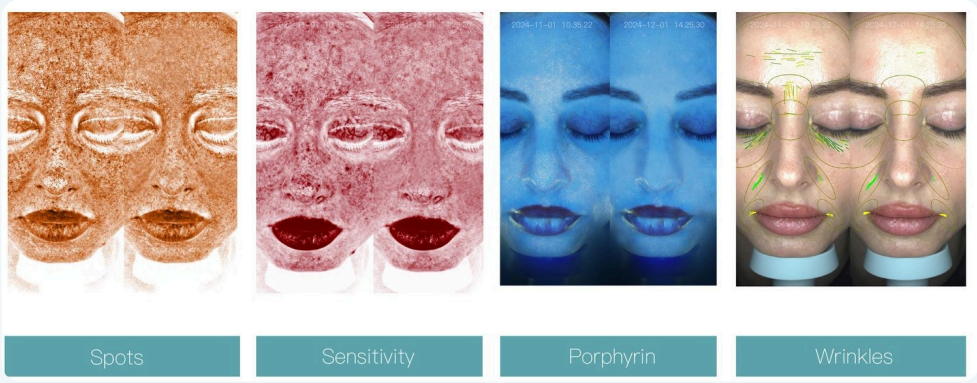

Ageing grades, 1 to 8

The software grades seven features on a scale of 1 to 8: forehead lines, frown lines, crow's feet, tear troughs, nasolabial folds, marionette lines and brown spots. The manufacturer describes this as an ageing index built with AI.

Before and after comparison

Images from two visits are placed side by side in the same view, so you and your client compare like with like. The comparison is available for spots, sensitivity, porphyrin and wrinkles.

Use comparisons honestly. A comparison only means something if both sets of images are taken the same way: same position, clean skin and no make-up. The images in this brochure are the manufacturer's illustrations of the software. They are not treatment results from our clinic.

SOFTWARE AND REPORTS

A report your client can follow

Client reports

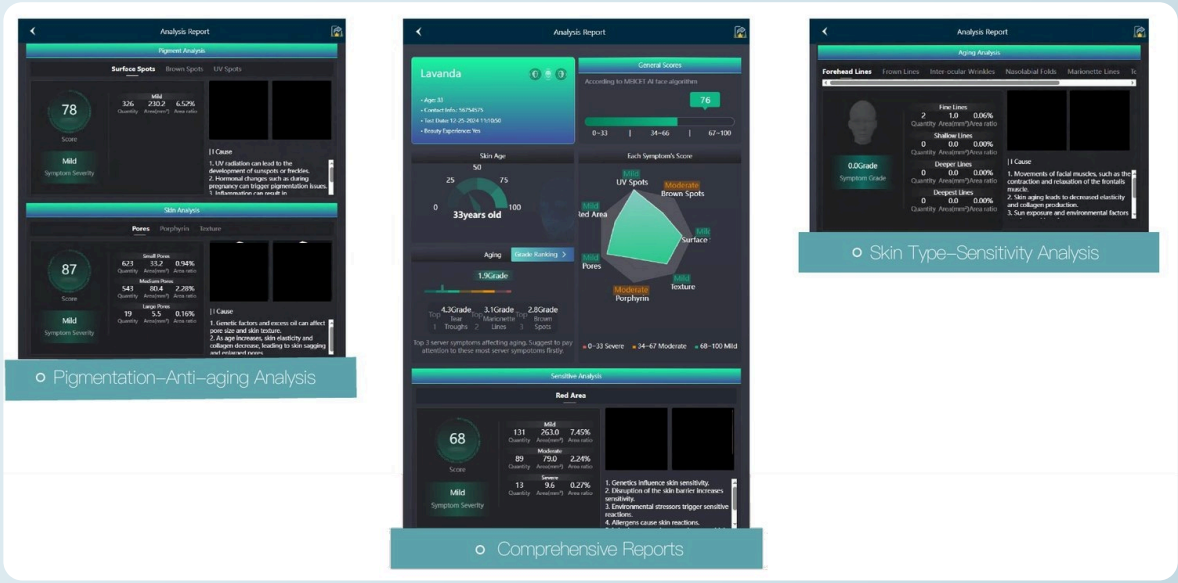

A report for each client with an overall skin score, an estimated skin age and the detailed results for ageing, sensitivity, pigmentation and texture. It is designed to support your treatment and skincare recommendations.

Windows or Android

The software supports both Android and Windows, so it runs on the tablet supplied or on a Windows PC, whichever suits your consultation room.

Different skin tones

The manufacturer states that the software uses separate reference data for different skin tones, which it lists as white, Asian, Middle Eastern and dark skin.

Manufacturer's sample report screens.

Scores are estimates. The skin score and skin age are the software's own estimates, worked out by comparing the images with its reference data. Use them to start a conversation in the consultation, not as a measure of health.

What it costs to run, and where the images go

The manufacturer marks four features as available only with its annual subscription, which it calls VIP. The other features in this brochure are not marked as needing it.

Ageing simulation

An illustration of how the skin might look as it ages, from 20 to 75 and over. It is a simulation to talk through with your client, not a prediction.

Data centre

Summaries of your client data by week, month and year, the split between new and returning clients, and the spread of age groups.

Mobile report

A report the client can view on a phone. Choose the full data version, or a simplified version with the images and descriptions only.

Cloud storage

Uploads your imaging records and client details to cloud storage as you work. The manufacturer describes the storage as unlimited.

Annual software fee

The manufacturer's fee for these four features is currently about US$180 a year, roughly £140. It is paid yearly and may change, so ask us for the current figure before you order.

Where your clients' images are kept. With cloud storage switched on, photographs and client details are uploaded to a cloud service. The manufacturer describes this as iCloud storage and has not yet confirmed to us which country the data is held in. You are responsible for your clients' images under UK data protection law, so decide how you will store them, and record each client's consent, before you use this feature.

WHAT YOU GET

Everything is in the box

The system

- QSPC-01 analyser with Canon camera and LED lighting
- Tablet
- Electric lifting trolley
- Magnetic blackout hood
- User manual

Training and support

- Skintastic training manual supplied with the system
- Technical support from Skintastic throughout the warranty period
- A named contact here afterwards, not a general helpline

Built for daily use

A touch-pressure switch, which the manufacturer describes as waterproof and dustproof, and a blackout hood that slides on magnets. Two colours: black, or white with gold. Both cost the same.

Not included as standard

The manufacturer also lists two optional test pens: one for moisture, oil and elasticity readings, and one for skin tone. On the manufacturer's advice we do not supply them as standard. Ask us if you want them.

Delivery. Built to order. Allow about one week for preparation and around two weeks for air freight to your door. Express courier delivery, around five working days after preparation, is available on request.

SPECIFICATION

Full specification

ITEM	QSPC-01 SKIN ANALYSER
Type	2D multi-light facial imaging and analysis system
Imaging	2D photographs. It does not create a 3D model of the face
Light sources	RGB, cross-polarised, UV and parallel-polarised light
Lighting technology	Solid state LED, modular light source design
Camera	Canon, 20 megapixels
Image views	Eight
Analysis	Ageing, sensitivity, pigmentation, skin texture and skin tone. More than 30 measurements
Ageing grades	1 to 8, across seven features
Operating systems	Android and Windows
Supplied with	Tablet, electric lifting trolley and magnetic blackout hood
Colours	Black, or white with gold

ITEM	QSPC-01 SKIN ANALYSER
Instrument size	416 × 414 × 513 mm
Packed size	489 × 468 × 580 mm
Net weight	10 kg
Annual software fee	About US$180 a year for the four subscription features
Machine warranty	Two years
Parts warranty	One year on consumable parts
Delivery	About three weeks from order by air freight. Express on request
Certification	CE and ISO, as stated by the manufacturer
Intended use	Professional clinic use, as a consultation aid
Classification	Not supplied as a medical device. Not MHRA registered. Not for diagnosis

Taken from the manufacturer's specification and written answers. If you need the full sheet before you decide, ask and we will send it.

CLASSIFICATION

What this system is, and what it is not

We are a supplier of MHRA registered medical lasers as well as cosmetic devices, and we are careful about the difference. It matters to your insurer and it matters to your clients.

It is a consultation tool

The QSPC-01 is supplied as an imaging and consultation aid for professional cosmetic use. It is **not supplied as a medical device**, it is **not registered with the MHRA**, and it does not diagnose any skin condition.

It is 2D, not 3D

It takes high resolution photographs under different lighting. It does not build a three dimensional model of the face and it does not measure volume. If you need true 3D imaging, tell us and we will advise.

Two things to check for yourself before you buy. First, how you will store client images and record consent, because you are responsible for that data. Second, that your insurer is content with skin imaging as part of your consultations. We will help you with the wording if it is useful.

Two years on the machine, one on the parts

2
years
The machine.

1
year
Consumable parts.

- Warranty cover is provided directly by Skintastic, not by an overseas factory
- Technical support throughout the warranty period
- Training manual supplied with the machine
- Full warranty terms available on request before you buy, not after

£4,650 plus VAT

Finance

Available over two, three, four or five years. Skintastic Aesthetic Supplies Ltd is FCA authorised, firm reference 964293. We act as a credit broker, not a lender, and we take no commission from the lender. Finance is subject to status and to lender approval.

Use the calculator at **skintasticaesthetics.com/finance** to see an indicative monthly payment, or ask us for a decision in principle, usually back within two hours in working hours.

Talk to us before you buy

A skin analyser earns its keep in the consultation, not the treatment room. Tell us how you run your consultations and we will tell you honestly whether this is the right system for you.
